GitHub | Portfolio | LinkedIn

PROFESSIONAL SUMMARY

Performance-driven AI/ML Engineer with hands-on enterprise experience at SLT-MOBITEL building production-grade predictive models, automated NLP pipelines, and data-centric software systems. Proficient in developing supervised/unsupervised machine learning workflows, retrieval-augmented intelligence, and high-performance backend microservices with Python, Scikit-Learn, and modern data architectures. Recognized for strong analytical rigor, maintaining a 3.45 GPA in Data Science with a Dean's List honor, and delivering scalable AI solutions from proof-of-concept to deployment.

TECHNICAL SKILLS

Programming Languages Python, SQL, Java, JavaScript, Kotlin, PHP

Machine Learning & AI Supervised/Unsupervised Learning, Regression, Classification, Model Evaluation, Feature Engineering, NLP Fundamentals, RAG Architectures, Vector Search

Data Science & Analytics Pandas, NumPy, Scikit-Learn, Matplotlib, Seaborn, Power BI, Exploratory Data Analysis (EDA), Statistical Data Cleaning

Backend & Databases FastAPI, RESTful APIs, PostgreSQL, MySQL, SQL Server, MVC Architecture, OOP

Tools & DevOps Git, GitHub, Docker, Postman, pgAdmin, VS Code, IntelliJ IDEA, Vercel

PROFESSIONAL EXPERIENCE

AI/ML Engineer Intern — SLT-MOBITEL May 2026 – November 2026

Digital Platforms & New Product Development (NPD) IT Division

- Engineered and validated predictive machine learning models and automated data ingestion pipelines using Python, Scikit-Learn, and SQL, supporting enterprise customer analytics and operational intelligence.
- Architected and implemented natural language processing (NLP) components and conversational routing workflows to automate query resolution and structured information extraction across internal communication streams.
- Preprocessed, cleansed, and normalized multi-source relational datasets across PostgreSQL databases, executing rigorous feature engineering and feature importance analysis to improve downstream model accuracy.
- Developed and exposed high-throughput RESTful APIs (FastAPI/Flask) to integrate trained machine learning endpoints into existing telecom enterprise platforms, ensuring reproducible scoring and low-latency inference.
- Collaborated in Agile sprints with cross-functional engineering teams; utilized Git for version control, automated testing scripts, and authored technical documentation for maintainable system handoffs.

SELECTED AI/ML & SOFTWARE PROJECTS

Real-Time Claim Verification & NLP Consensus Engine — GitHub Repository

| Python, FastAPI, NLP / Vector Retrieval, spaCy

- Built an end-to-end intelligent claim verification system utilizing semantic search, dense vector embeddings, and multi-source consensus scoring to detect mischaracterizations and score factual alignment in real time.
- Constructed optimized text preprocessing, tokenization, and entity extraction pipelines, serving low-latency inference through a modular FastAPI backend architecture with structured JSON output schemas.

E-Commerce Customer Behavior & Churn Analytics — SLIIT Data Science

| Python, PostgreSQL, Scikit-Learn, Power BI

- Analyzed 3,900+ multi-attribute consumer transactions to discover purchasing trends, high-churn customer segments, and revenue drivers using Python, Pandas, and PostgreSQL.
- Engineered interactive analytical dashboards in Power BI connected directly to database views, empowering data-driven stakeholder decision-making and cross-selling strategy formulation.

ElderCare Automated Chatbot & Management Platform — SLIIT Group Project

| Java, MVC Architecture, Automated Messaging, MySQL

- Co-developed a multi-tier residential healthcare platform with automated rule-based reply chat modules, two-way messaging, automated report generation, and role-based access controls for elders and administrators.

Voice RAG Bot — SLT-MOBITEL Internship

| Python, voice-enabled retrieval-augmented generation (RAG)

- Worked on a voice-based RAG chatbot during the SLT-MOBITEL AI/ML internship; individual implementation responsibilities and supporting repository details are pending verification.

Sinhala–Tamil Translator — SLT-MOBITEL Internship

| Python, Whisper (reported)

- Worked on a Sinhala–Tamil translation application during the SLT-MOBITEL AI/ML internship; exact speech-processing workflow and individual contributions are pending repository verification.

AURA — Online Shopping Platform — Group Project

| HTML, CSS, PHP

- Developed the homepage and user account management modules, including responsive homepage design, registration, login, and account profile features.

CatchMe — Online Bus Ticket Reservation System — Group Project

| Java, JSP/Servlets, MVC

- Contributed user registration, passenger account management, and informational pages; worked on form validation and session handling.

DriveMate — Android Mobile Application — Individual Project

| Android Studio, Figma

- Developed a vehicle maintenance and service management app supporting service bookings, vehicle history, ownership and mileage records, and vehicle details.

FitPro+ — Wellness Mobile Application

| Android Studio, SharedPreferences

- Created habit tracking, mood journaling with line-graph trends, customizable reminders, and habit widgets with local data storage.

EDUCATION

Sri Lanka Institute of Information Technology (SLIIT) (Ongoing)

BSc (Hons) in Information Technology — Specializing in Data Science | Current GPA: 3.45

Dharmaraja College, Kandy

G.C.E. Advanced Level (A/L) — Mathematics Stream

HONORS & CERTIFICATIONS

- Dean's List Award (1st Year) — Sri Lanka Institute of Information Technology (SLIIT), recognized for sustained academic distinction.
- Agile & Scrum Fundamentals — Applied sprint planning, backlog grooming, and code reviews across collaborative software delivery cycles.
- AutoDesk AutoCad Certificate Course — 3D ART Institute.
- Certificate of Service Training in Auto Electrical & Programming (OBD) — OBD Academy.
